

WOUND CARE DryMax[®]

FOAM

DryMax Foam is indicated for use on exuding wounds. DryMax Foam is a sterile, polyurethane foam dressing with the exudate management properties of a superabsorbent dressing. The wound dressing has a soft adhesive contact surface to facilitate dressing application.

DryMax Foam

DryMax Foam is a thin and discrete wound dressing that can handle small to large amounts of wound fluid. The dressing locks in wound exudate more efficient than conventional foam dressings and can also handle thick wound fluid. The surrounding skin is prevented from maceration while a good moisture balance is achieved in the wound area. The wound exudate is effectively transported away from the wound and distributed evenly into the ABSORBEST core. DryMax Foam absorbs wound fluid that contains bacteria and other harmful substances.

A soft adhesive layer is covering the wound contact surface. This will enhance the dressing application and work as the caregiver's extra hand. The soft adhesive enables reposition and provides a gentle surface at dressing removal.

The blue hydrophobic backing reduces the risk for wound fluid strike-through. The DryMax Foam is designed to work well together with compression therapy.

The dressing must be placed close to the wound, or placed in close combination with a suitable dressing.

Secure the dressing with suitable bandage, film or tape.

DryMax Foam can be used in conjunction with compression therapy.

- Cost effective
- User friendly
- Increased patient comfort
- Improved wound healing

Item	REF	Pcs/box	Product size (cm)	Absorption capacity*
DryMax Foam 7.5x7.5 cm	F60041/10	10	7.5x7.5	60 ml
DryMax Foam 10x10 cm	F60043/10	10	10x10	130 ml
